The Redmi Note 9 consistently edges the Redmi Note 10 graphically. NoteKOMPAS.com - Samsung percaya diri melabeli Galaxy Note 10 dan Note 10 Plus sebagai "Powerful Galaxy" dengan menggunakan performa perangkat. Duo Galaxy Note 10 dan Note 10 Plus diotaki chip Qualcomm Snapdrgaon 855 untuk pasar tertentu seperti AS, serta Samsung Exynos 9825 untuk pasar internasional, termasuk di Indonesia. Seberapa gegas kinerja lini ponsel flagship teranyar dari Samsung ini? KompasTekno coba mengukur berapa skor benchmark yang diperoleh Galaxy Note 10 Plus versi Exynos 9825, model RAM 12 GB dan memori internal 256 GB. Baca juga: Selisih Harga Rp 5 Juta, Ini Beda Galaxy Note 10 dan Note 10 PlusUji coba dilakukan menggunakan dua aplikasi benchmarking populer, yakni AnTuTu dan Geekbench 4. Dari beberapa tes yang dilakukan, skor yang didapat berkisar pada angka 350.000 poin untuk AnTuTu. Skor tertinggi yang didapat adalah 351.146. Sementara untuk Geekbench, rata-rata skor yang diraih mencapai kisaran 4.500 poin untuk single-core. Untuk multi core, skor yang didapat menembus angka 10.000-an poin. Wahyunanda Kusuma/Kompas.com Hasil skor benchmark Galaxy Note 10 Plus versi AnTuTu (kiri) dan Geekbench 4 (kanan) Hasil ini tidak terlalu jauh berbeda dengan skor benchmark dari perangkat Galaxy Note 10 versi AS yang ditenagai Snapdragon 855. Dirangkum KompasTekno dari Tech Radar, Senin (19/8/2019), skor benchmark Geekbench Galaxy Note 10 Plus versi Snapdragon 855 adalah 10.849 untuk uji multi-core. Hasil yang didapat terbilang cukup tinggi untuk ukuran System on Chip (SoC) saat ini. Skor tersebut juga sedikit di atas Galaxy S10 Plus yang diotaki chipset Exynos 9820. Baca juga: Beda Galaxy Note 9 dan Galaxy Note 10, Saatnya Ganti?Dari uji coba yang juga pernah dilakukan KompasTekno, Galaxy S10 Plus meraih skor benchmark AnTuTu sekitar 334.168 poin. Sedangkan untuk Geekbench, selisihnya lebih tipis karena Galaxy S10 Plus mencetak 4.499 poin untuk uji single-core dan 10.052 poin untuk multi-core. Exynos 9825 merupakan chip premium terbaru dari Samsung yang diproduksi melalui proses fabrikasi 7nm dengan teknologi Extreme Ultraviolet Lithography (EUV). Teknologi tersebut diklaim bisa membuat performa perangkat lebih cepat hingga 30 persen dibanding generasi sebelumnya, tapi konsumsi dayanya lebih irit hingga 50 persen.Baca juga: Memotret Seoul dengan Kamera Samsung Galaxy Note 10 Plus Chip Exynos 9825 sendiri merupakan SoC octa-core dengan delapan inti CPU yang terbagi ke dalam tiga cluster, yaitu 2 x 2,73 GHz (CPU custom Samsung M4), 2 x 2,4 GHz (Cortex A75), dan 4 x 1,95 GHz (Cortex A55). Kecepatan inti CPU Cortex-A75 di Exynos 9825 sedikit lebih tinggi, sekitar 100 MHz, dibandingkan Exynos 9820 yang dipatok di angka 2,31 GHz. Tiga cluster CPU ini kemudian dipadankan dengan pengolah grafis (GPU) yang serupa dengan Galaxy S10, yaitu Mali G-76 MP12, namun kecepatan clock GPU untuk Galaxy Note 10 ini sedikit lebih tinggi dibandingkan chip pendahulu. Anda harus install aplikasi Telegram terlebih dulu di ponsel. Xiaomi is working on its Mi 10 flagship lineup and it looks like at least one of its members is approaching a market launch. Today, a well-trusted leakster posted a photo of the back of a phone with four vertical shooters, claiming it is the Mi 10. The photo was complementing another post, revealing the upcoming smartphone reached over 560,000 on AnTuTu thanks to its Snapdragon 865 chipset and Adreno 650 GPU. Xiaomi Mi 10 The benchmark is the first to go above the 500,000 threshold. It is 15% more than the best-performing Androids in the market based on the Snapdragon 855+. Sadly the benchmark scorecard stops short of revealing any other specs. We expect the phone to see a 64MP shooter in the vanilla phone, while the Pro variant might sport the 108 MP sensor that is already available in the Mi Note 10. If you are wondering whether you need such a camera or not, worry no more - we've done the research for you. Source (in Chinese) | Via
