

I'm not robot!

Facebook has become a household name. Originally "Facemash", it was created in 2003 by then-Harvard student Mark Zuckerberg. After going through a complete revamp due to the nature of the website at the time, the social networking website was made commercially available in 2006 to all users over the age of 13. Over time, Facebook became available on mobile devices as well as on PC and has grown exponentially, acquiring popular apps like WhatsApp and Instagram, creating its own messenger service, and hosting its own game shows, original scripted shows, and livestreams, among many other services. Facebook has headquarters all over the world, and the network now not only contains individual user profiles for fun, but helps users connect with pages for local and international businesses, celebrities, and politicians. The website has become a required tool for growing businesses and is a point of contact almost as important and necessary as email, due to the millions of people that have an account and access the site each day. The main use of Facebook is for users to connect with family and friends. After creating an account, you can update your profile. You'll add your name, birthday, location, workplace, school, and relationship status. Upload a profile photo and a cover photo, which appears as a large banner behind your profile picture. Add links to other social media sites like Instagram and Twitter; you can share posts directly from those sites to your Facebook page as a status as well. After setting up your profile, you can search for friends by searching their name or email address. When you find who you're looking for, just click the "add friend" button and they'll get a notification. Once they've approved your request, they'll be able to see your profile and you can see theirs. As well as friending someone, you can unfriend them too. There are a ton of things that you can do with your status, which is the text box that appears under your cover photo on your profile page and at the top of your timeline. You can block certain people from seeing certain statuses or from seeing your profile altogether in your settings. In the status box, you can update your friends in any way you'd like, showing what you're doing, watching, or playing. Tag a friend that you're out with and everyone that they're friends with can see it too. Friends can like, comment on, and share your statuses. Sometimes news websites and other businesses that have Facebook pages post videos that may contain sensitive content. Luckily, Facebook flags the video with a warning so you'll know before you start the video. If you want to chat to friends more privately, send them messages in Facebook Messenger, originally Facebook Chat. On Facebook web you'll get a pop-out chat box, or you can use the standalone Facebook Messenger app on iOS and Android. You can chat and video call your friends too. Groups are an extremely useful feature for leisure and business - create a public or private group for any topic, and add people. This way, you can connect with everyone at the same time by posting statuses, photos, polls, and links. If you're at a concert and want to share the experience, you can broadcast live so your friends can see what's happening. There have been privacy scares in the past, like last year when Cambridge Analytica, a data analytics firm, was able to get information from about 50 million Facebook users without their knowledge. Since then, Facebook has said that it is making strides to improve the safety for users and their private information. If your page is set to private, people not on your friends list can only see your name and profile picture. The site uses facial recognition for uploaded photos, so you can turn that off as well in your settings. You can login to Facebook when signing up for outside games and apps, but those companies will then have access to your information. Guess what? You can change that too by removing those apps from your 'apps and websites' settings. If you'd rather just play games on Facebook, you can do that too. The hugely popular Candy Crush is still going strong, along with other user favorites like FarmVille, casino games, puzzle games, and more. Is there a better alternative? Social networking has come a long way since MySpace (which is still around!) and Xanga, the first websites to test the waters of friends lists and statuses. Facebook is one of the largest social networking websites of its kind, and there aren't a lot of sites like it. With Twitter, you can tweet small statuses and share video and photo, and Instagram is more photo-based, becoming popular with the addition of stories, clips or screenshots that appear at the top of your Instagram profile for 24 hours. There are many apps like those, including WhatsApp, that are more meant to be used for sending a quick message or photo. Even though other social media can do specific things well, Facebook is a mixture of all of them put together. The interface is incredibly user-friendly, incorporating messaging, gaming, groups, buying and selling, and more all in the same place. Where can you run this program? You can run Facebook on any platform that you can think of. Desktop browsers run it well, and it has standalone apps for Apple and Android mobile devices and tablets. You can view Facebook on gaming consoles, some smart televisions have the app, and if you're a fan of the Amazon Echo, Facebook has its own version in the Facebook Portal which allows you to video chat with all of your Facebook friends. There's a reason that the site is as huge as it is - you can't do anything online without running into a website or app that isn't owned by or partnered with Facebook. Facebook is going to be around for a long time and will only get more popular. Whether or not it will lose popularity and succumb to the same fate as MySpace did has long been a hot topic of discussion, but we don't think that will happen. Should you download it? Yes. Games, chatting, video, photos - Facebook has it all. Instead of downloading a ton of different apps that each do one thing, just having Facebook will be more than what you're looking for, especially if you're not into keeping up with the newest social media. Chances are, if Facebook doesn't have it now, it will soon, and they'll make it user-friendly and easy for people of all ages to understand. We recommend Facebook for a number of reasons - everything and everyone that you need, all in one place. It's fun and reliable, and it's not going anywhere. Highs Socializing with friends Ability to share many types of media Keep in touch with people who live far away Low Privacy Excessive notifications Ads during videos Organize your life - for free Serious IT professionals trust VMware Workstation Pro for their virtualization needs Undoubtedly one of the heavy hitters when it comes to cloud storage If you need a tool to make calls online, Skype's certainly a genuine option with lots to offer a certain kind of user The leader in video and sound players The program that recovers what's been lost Computer gaming PlayStation style OS Languages: English, Czech, Danish, German, Greek, Spanish, Finnish, French, Italian, Japanese, Korean, Dutch, Norwegian, Polish, Portuguese, Russian, Swedish, Turkish, Chinese License: Free Developer: Facebook Softonic review Facebook for Windows is a social media app that allows you to use a native PC app rather than logging in through a browser. You'll also get desktop notifications for events, even when it's minimized. Share thoughts, customize your news feed, edit privacy, and manage groups. Desktop Facebook is convenient for anyone who enjoys being active on this platform. More connected than ever before With the Facebook app download for your PC, it's never been easier to keep up with the ever-growing online community. Stay in touch or reconnect with friends and family on any device. This app will use your PC's location, webcam, microphone, picture, and video connection. Once you install Facebook, the software will operate by accessing your internet connection and generating dynamic code. Installing Facebook on your Windows device is a quick process, and the file is about 164 MB in size. Once you have the program on your PC, you'll like the usability. Simple to navigate & stay up to date The interface is familiar and easy to navigate, and the design is sleek and clean. While there are not many new features, the software offers seamless browsing and effortless user experience. There is no major learning curve even for the most novice user. Once you enter your Facebook login information, you'll see a tabbed menu on the left side of the screen with included items like News Feed, Groups, and Friends. Whenever someone sends you a message, invites you to an event, likes, or comments on your posts, you will receive a desktop notification. Get the word out Let your network in on your daily thoughts or opinions about the world by changing your Facebook status. The box will prompt you by asking, "What's on your mind?" Maybe it's not something you want your active grandmother to see. Post it anyway! Choose who can see your update by clicking on the "friends" dropdown menu, and specifying your audience. Some of the most useful Facebook functions are the group features. Whether you want to plan a holiday party or organize a protest, this is the platform for doing it. With the desktop app, see the groups that you're involved in or are admin for. Groups are a great way to interact with those who have similar interests. Organize your feed You can customize the way that your News Feed appears by heading to your News Feed Preferences. Change these settings depending on the friends you want to see at the top of your timeline when the images appear and click on the profiles that you want to hear more from. The app will recommend video and news clips just for you. You can interact through adding comments, or reacting to posts and media by liking, loving, laughing, crying, or expressing anger through the emoji button. Share your favorite moments One of the best advantages of the FB app is that it allows users to upload photos and videos in a snap. Never miss the chance to share the most special moments. You can also share images across popular social media platforms like Instagram. The software supports a range of video files such as .avi, .MP4 and .mov. Unfortunately, you cannot download videos directly through Facebook for Windows. Control your privacy If you're concerned about privacy, you can change your default settings from within the Facebook app. If you want to adjust your 'Privacy Shortcuts', the software will redirect you to the browser site. FB contains a vast amount of tools for preventing your data from being mined by any third parties. Under the section titled "Who can see my stuff", change the audience of your future posts and hide what you share from specific people. You can also change the settings for your email, address, and phone number so that no one can find your account by searching. Don't forget to limit your profile visibility as well. No games on the PC app While the PC version of Facebook has a lot to offer, you cannot play any of the fun and entertaining games. You'll see that there is an option on the menu, but the app will redirect you to the FB website in your internet browser. After that, you'll have all the access to your favorites. Redirected to the browser often One major issue with this app is that it redirects you to a web-browser too often. You cannot manage chats or make voice and video calls; for that, you would need to download Facebook messenger or use a different app like WhatsApp. If you forget your password, you will be redirected to the site for a two-step verification, where you will then be able to reset your information. You still have to deal with ads Across platforms, the FB dashboard is full of advertisements, which get in the way of posts from loved ones and old friends. Unfortunately, downloading the software onto your PC does not get rid of paid suggestions. You will still be shown advertisements based on Facebook's algorithm. Not enough new features Facebook for Windows can do most of what you can do on the web-based or mobile counterparts, though you'll be redirected often to a browser. The native software does not include anything new, but the interface is seamless, and it's convenient to have access to this powerful social network on all of your devices. In recent updates, there has been an increase in speed, and bugs have been fixed regarding the option to "load more comments." The app functions well on any desktop, and we're looking forward to the next version, which will hopefully include exciting new features like dark mode.
