This is a quest game where you have to find all the keys and open the right doors. If you like fun but challenging puzzles, this game is for you! Game features: - Crazy plastic graphics - Cheerful music. - Single leaf door - 12 locks Worth it. i love if you don't i can blame you if you don't because it's hard but i love it it's a fun game and if i could play it every day it would be so great yeah, and i mean so much fun and all that equipment is made out of clay and it's really cool. I would definitely recommend finishing the game in 15 minutes so you know the developers and others have been hard at work on this. It was better than other puzzle games I've played before. Download if you can't find a good and challenging puzzle game. The only thing i changed was to add text below the elements to tell me what they are. For a long time i thought that an ice cube was shaped like a key and a can opener was a key. Unless to save, 10/10 The developer of the interface, Rudolf Lachinovs, indicated that the application's privacy policy may include data processing as described below. For more information, see the developer's privacy policy. This data may be used to track you across third-party applications and websites: this data may be collected, but it is not associated with your identity: privacy practices may vary, for example, depending on the features you use or your age, which age or age. To enable the screen on Android 10/9, go to Settings > Biometrics & Security > Other Security Options > Advanced > Pin to Windows. To turn on the screen in Android 8 and 7, go to Settings > Lock screen > Other security > Other security > Other security > Other security > Other security settings > "Windows Pin" This article describes three different Android ways to lock apps. Device. The instructions apply to Android 10, 9 (Pie), 8 (Oreo), and 7 (Nougat). Screen pinning locks the app in clear view. Attempting to close it or access the home screen will log you into the lock screen security. To find out which version of Android your device has, go to Settings, then tap Phone Information > Software. Pin the app screen so you can see it while unpacking. Open settings andThis is Escape Room, where you can find all the keys and unlock the target door. If you like funny but challenging puzzles, it's the right game for you! Function of the game: - Crazy Plastinein Graphics - Funny Music. - door - 12 locks - 12 incredible puzzles in 2022 29. January version 1.3.3 It's very difficult, but it's worth noting if you don't love them, I can blame you if you don't love it because it's difficult but otherwise Like it, it's a very fun game and I would do it that I would play it every day, if I could, it's so beautiful and so and so I mean so much fun and the whole sets and surroundings and surroundings are made of clay and it's really great. I can really recommend it. It took 15 minutes and did everything, so they know that developers and others worked hard. It was better than other puzzles I had played before. Download it when you don't find a good and demanding logical game. The only thing I would change is to add some text to the elements and say what they are. I thought for a long time that the ice cube had the shape of the key and opened the key shape. Otherwise, 10/10 experiences of Rudolf's Lacinov developers pointed out that data protection procedures in the application may include data processing described below. For more information, see Developer Data Protection. This data can be used to track them on applications and websites of other companies: this data can be collected, but they are not associated with their identity: data protection procedures may vary, for example, depending on the functions or their age they use. Further information to activate the screen fixation on Android 10/9 Set up to Settings> Biometry and Security> Other Security Settings> Advanced> Correction window. You want to activate the screen fixation on Android 8 and 7, go to Settings> Screen lock and Safety> Other security settings> fix Windows. You can also use third-party applications such as Samsung Secure Folder, AppTock and Norton App Lock to block Android applications. This article explains three different options for locking applications on Android devices. The instructions apply to Android 10, 9 (Pie), 8 (Oreo) and 7 (Nougat). By connecting the screen, the application is blocked in Open View. If you try to close or approach the initial screen, a security input for the lock screen is called. If you want to find out which version of Android is installed on your device, go to Settings, and then click telephone information> Softwareinfo. Fix the application screen to see it until you solve it. Open settings andSecurity or Biometry and Security> Other Safety Parameters. Scroll down to the bottom. Choose a field of options next to the pins. Turn on the questionnaires on the tilt switch screen to activate the screen fastening. To optimally use screen attachment and guest accounts, pre-set a safe blocking pin, password or model. Before you lose it, select the PIN to activate it to make additional security. Select the search symbol (square at the bottom of the screen) and tap the symbol of the program you want to add. If your phone does not have a button you need to look, you need to clean the application you want to add the application and tap the symbol at the top. Select PIN this app. You can get a payment notice. Choose OK to continue. Press and hold back and check at the same time to release the program. With some Android phones, you have to press the "back" button and "main" to remove and hold. Enter your pin, model, password or biometric safety option to turn off the screen. This is not a program. If you use the older version of Android, the instructions are slightly different. On some phones with Android 7.0, go through 1, 2 and 3 steps: Settings> Safety> Screen Fixing. Open the settings, then tap the lock screen and security. Choose other safety settings. Choose a PIN window. In some phones with Android 7.0 you have to go to Settings> Security> screen fixation. Choose the option to activate the screen fixation. Choose "Use screen type" to activate the switch and turn on. In some phones with 7.0 ASSK front front model options are called unin. Choose an overview and move the mouse cursor through the program window you want to lock. Choose zippers in the lower right corner and click Start. Pressing received it on some phones on which 7.0 is done by pressing. Hold the back and check the characters to turn off the window. In some phones with 7.0, you just have to press the Back button to unin and keep it down. Enter your model, PIN, password or scan 'biometric safety' option to turn off the app. With Samsung Secure Polder, you can protect your selected applications by blocking them with your selected safety option. If your device does not have a secure folder and contains Android 7 or more, download it from Google Play or Galaxy apps. A safe folder is pre-installed on all Samsung flagship equipment and returns to the Galaxy S7 series. Select Settings and Tap Biometric Data and Security. Select Safe Polder. Tap the greeting screen on the greeting screen and then register with your Samsung account ifChoose the type of locking. Choose a model, a PIN code or a password (or a biometric option, if possible), then continue by entering the selection and confirming it. Choose a safe folder for the program drawer, then touch the Add apps. Choose programs you want to join in a safe folder, then press ADD. Choose a castle and go out in the upper right corner. There is a short message indicating that the safe file is now blocked. An attempt to reach a safe file encourages the type of locking selected. Enter your model, pin, password or scan the biometric safety option. The program failed. Access Google Play and download Aplock or a similar tool to block applications and protect files. Many programs that block or protect the content of the device, require many system permits and rights, such as other availability programs and habits. Locking the Norton application via Symantec is a useful tool for protecting applications and private files stored on the device. Norton App Lock is free to download and support Android 4.1 and UG. You can limit access to all applications or select specific programs that you want to block: find the Norton app for Google Play, then select the installation. During installation, select Open. Display the license contract, conditions of use and confidentiality rules, then select "Sutont & Run". Choose OK when you call the authorization. Select the screen to allow the switching switch via other applications. Press the "rear" button. Stay configuration. Select the installed services. Select the Norton application locking service. Switch switch switch. Let's be. Press the rear arrow. You should see a set of NORTON application locking services. Press twice. Draw the unlocking model or press the switch to the access code code, then enter the password. Draw a unlock motif to confirm or touch again if you want to present it again. Choose a Google account. Choose a Google account you want to use to reset the password, then select OK. Choose continue. Choose the "yellow locking" icon in the upper right corner, then select a lock next to the application you want to protect. Choose a yellow lock when you want to activate or deactivate the application locking. After blocked the programs, only the code created will provide access. Fak How to block the Samsung S10 applications? Access the application drawers and select a safe folder, press Add apps, select the apps to be activated in a safe folder, then press Add. Can I deactivate the lock of the Samsung S10 application? When you want to abandon the program, access a safe file, then, depending on the safe file setting, enter your model, pin your word or password or scannerSecurity option. Thanks for letting us know! Get the latest technology news Daily Subscribe to us why! The app lock is probably the most basic security app. It works by blocking other travel apps. You must enter a password or something to access the application. They work better in combination with lock screen lock to provide two layers of security. What is worth having? We will help you with best android app record and best privacy record. Best Android app lock app locks work and do I need it? Application lock is an interesting type of security application. The main function is a reasonable idea. This prevents people from logging into the app without their pine code, his fingerprint, or some sort of code. An extra protective layer protects you from adjacent eyes from sensitive applications such as social networks, gallery and other similar applications. That's all. Application lock is only the applications. They can hide from the app drawer to prevent instant hacks, but you can remove it and it will be gone. After all, a person with reasonable technical knowledge can bypass the app lock without much difficulty in no time. App blocks work, but we don't recommend using them as the first and only layer of security on your phone. Do you need it? Actually it depends. The best use case for Applock is the case of people with children. Kids are not very interested in technology, especially when they are younger they probably won't know how to do it and access a banking app. These types of short-term use cases are ideal for application. In short, the applications work. However, we would not like to rely on these apps as our first line of security. Lock screens are much more effective at keeping foreigners out of your business. Apex Launcher is a great launcher and it turns out it has an app lock feature. The launcher features are pretty good and include various settings, icon pack management, various effects, and you can hide items like the status bar or the dock if you want them to be invisible. There are also certain app security features, including the ability to mask apps in the app drawer and an app lock feature with a password-protective level for added security. It's always a little better if you engrave in a launcher than a dedicated app, so if you don't mind redoing the receive screens, this is smart launcher tooBelow) There are good alternatives to dedicated Paddock programs. See also: Best Android launchers to make your home screen perfect Domobile Lab Applock is definitely one of the best launchers. The app can do basic things like blocking special apps. It can also block certain images and videos. It also includes uninstall protection, fingerprint support, and even blocking incoming calls, uninstalling apps, and various system features such as Bluetooth. The program can be downloaded and used for free. You can unlock Premium features, enable ads, or pay for the Premium version with a donation. It's a powerful app and one of our favorites. Applock is another of the best apps for Android. As you can see, it can block almost every app on your phone. It also offers the ability to block photos and videos. The app has an invisible pattern lock as well as a random keyboard in case someone tries to look over your shoulder. You also get a theme, the ability to change the icon to hide the app, lock the frequency and more. It even takes pictures of people who didn't put their password on the right. It is completely free to download and use. This is another good one for that. See also: BGNMOBI Best Gallery Vault app for Android Appocker is the right app. It does most of the same things as other Paddock apps. This includes blocking apps and different ways to access them. You get fingerprint support as well as pattern and password unlock. It also has several customization options and can prevent other users from uninstalling the app. It blinds you with lots of extra or unnecessary features. It's just a simple app blocker that does a pretty good job, and it's cheap. You can use it for free if you also subscribe to Google Play Pass. Norton is a well-known name when it comes to antivirus software. As it turns out, they also provide a free app locker. It uses four different pins, password or pattern as the lock system. It also supports photos along with apps. The app also comes with a recommendation list that tells you which apps to close. It's a great tool for those who want a more hands-on approach. Like most, it also takes pictures of anyone trying to get into your phone. This can be bypassed if the lock is sleek, but it's still one of the heaviest covers around. The perfect envelope is another of the best placematsIt has the basics, including support for blocking Wi-Fi, Bluetooth, and other switches. It's also frustrating that this is happening. It throws fake errors and all kinds of other messages. It makes people think there is some problem other than spanking. The free and paid versions offer exactly the same features. The only difference is that the paid version does not contain ads. It's a solid option all round, even if the name exaggerates its somewhat clever capabilities. Another decent free applock option applies. It sees your apps and photos including settings, switches and phone app (for phone logs) to protect all those people. It disguises itself as a lock screen. That's how people think they'll go back there again. Apart from that, it offers auto-launch on reboot, burn-in warnings, delayed app lock, and has fingerprint scanner features for Samsung devices. This is an ad-supported free option. The only downside is that it's pretty easy to uninstall once someone finds out it's there. See also: What is a VPN and why do you need one? Price: FREE / Up to \$6.99 Smart Launcher 6 is a newer launcher with decent security features. The app offers launcher content like ambient theme, adaptive icons, app sorting, gestures, hotkeys, etc. One of the niche features is app lock. The launcher hides apps that others don't want to see. Also, if they find the apps, they will be PIN protected. We'd love to see fingerprint support, but it's a full launcher with built-in app lock, and that's a rarity in this space. Fortunately, this rarity is also quite decent as a launcher and app locker. SPSoft Applock is a decent option for applocks. It has password, pattern and fingerprint unlock. This is good news for owners of fingerprint readers. As with many others, this will require selfies of people trying and failing to access your apps. It also has lots of fun little extras. You can display the unlock pattern on a grid up to 18x 18 instead of the traditional 3x 3. It also displays a fake error message instead of a lock if you wish. If you want, the app keeps the screen on even while using some apps. This is a good option that also supports more than 30 languages. See Also: Best Android Password Manager Apps Price: FREE / Up to \$7.49 Joe Hindy / AndroidApplock is another suitable application with enough functions for most people. You just open the app, block the necessary applications, then you need a password to enter them. The program supports fingerprint locks and can send alarms with intermittent if someone guesses the wrong password. Part of the application of this program works well. However, it also includes some batteries cleaning and saving functions that do not work completely, and we recommend that you not even touch them. This is quite good and should do the most often if you follow cleaner features. Characteristics.
