All io games in one place. All.io games list.

No new notifications You'll get updated when important things are happening, and when you engage with our community. The best .io games still have a place, even if that place is taken up by mobile games that offer more premium, on-the-go experiences. But amid all that flash, tiny, browser-based minigames still deliver an intense, multiplayer rush.The best .io games continue to be a viral phenomenon popularized by Twitch streamers and their presence in an episode of House of Cards. The ".io" extension stands for the British Indian Ocean Territory, but because Agar.io, one of the first super popular multiplayer .io games used the extension, it's since become a popular choice, giving the name to the genre. Light and accessible but capable of intense and sometimes even ruthless gameplay, the best .io games can be played even on a spotty connection and old hardware. With the sheer number .io games out there, it can be hard to figure out which ones are worth a shot, so we've collected a list of the best .io games that keep us coming back for more.The best .io Games you can play right now1. Agar.io(Image credit: Agar.io)The great granddaddy of them all, Agar.io (opens in new tab) is an eat or be eaten game of cellular survival taking inspiration from the behavior of microbes on top of the agar medium of a petri dish, hence the name. Players start small, zipping around the map and eating food to gain size. Eventually, you grow large enough to engulf other player cells, resulting in a deadly cat and mouse game as you try to lure other cells into your grasp while evading larger swarms of players that can engulf you. Simple but tense gameplay made it a viral sensation, as it was even featured in an episode of House of Cards. (Image credit: Slither.io)Slither.io (opens in new tab) takes inspiration from the classic game of snake, as players slither around the map consuming motes of food in order to grow in size and points. Maneuvering is the name of the game here, as players are eliminated when their snake's head collides with the body of another snake, resulting in players suddenly changing direction or coiling around in order to trap and eliminate the unwary.3. Diep.io(Image credit: Diep.io)Diep.io (opens in new tab) is another classic game, this time with players controlling tanks, destroying obstacles and enemy tanks to gather points and level up their own machines. A reasonably involved upgrade system lets you outfit your tank to your liking, allowing you to build bullet-hell monstrosities, agile attackers, or powerful snipers. Varied game modes, from free-for-alls to team battles and more give Diep.io some good replay value and reasonable depth, while still being a pretty accessible browser game.4. Gats.io(Image credit: Gats.io)Gats.io (opens in new tab) takes the military shooter top-down, as players select weapons and armor and then carefully hunt each other down in a tight maze of barriers and passages. Each weapon brings its own advantages and disadvantages, and players will have to balance out the mobility and protection tradeoffs of armor or the lack thereof. Fast playing and reasonably accessible, Gats.io offers free-for-all, team deathmatch, and control point domination modes, giving you some variety in gameplay.5. Brutal.io(Image credit: Brutal.io)Brutal.io (opens in new tab) lives up to its name as players pulverize each other with giant spinning balls of death. Starting out with a small morningstar-like ball attached to your player, you'll sprint around the map to gather up food, slowly growing the size of your deathball, which you can then fling at other players, using a combination of spin, planning, and more than a little dumb luck. If the throw doesn't get them, then the return just might, as holding down your mouse button summons the deathball back to the player's tail, flattening everything in its path.6. Gartic.io(Image credit: Gartic.io)Tired of the kill-or-be-killed intensity of other .io games? Gartic.io (opens in new tab) is a far more laid-back affair, as players take turns in a charades style game, with one player drawing a designated word and the others having to guess what that word is. Gartic handles the scoring and book keeping, and language-based game rooms allow you to play in the language of your choice.7. Warbot.io(Image credit: Warbot.io)Warbot.io (opens in new tab) is a bit of an outlier among other .io games in that it features 3D graphics, providing great eye candy, but also slowing down loading times, especially for those without high speed connections. Warbot is a top-down twin-stick style shooter, with the mouse cursor controlling your aim, while the WASD keys control your movement. Players march through the battlefield, engaging other mecha while dodging enemy fire, gathering powerups and crawling up the leaderboard.8. Zombs.io(Image credit: Zombs.io)Zombs.io (opens in new tab) brings the inevitable zombie survival spin to the genre, as players slowly build up their bases, establishing defenses and walling off choke points, gathering up resources in the daytime and fending off the hordes at night. From there, it's a battle of endurance and survival as you upgrade your towers and personal gear in order to fend off ever tougher waves of the undead.9. Wings.io(Image credit: Wings.io)Wings.io (opens in new tab) takes the multiplayer mayhem to the skies, as players engage in 2D grand melees, their fighter planes rocketing all over the place, picking up powerups, weapons, and engaging in twisting dogfights as you try to line up the perfect shot while keeping your tail clear of enemy fighters. Look elsewhere for deep simulation, as this is a whirlwind furball of planes zipping around and engaging in fast-firing carnage.10. Deeeep.io(Image credit: Deeeep.io)Deeep.io (opens in new tab) has you evolving into a variety of fish and animal forms as you gather food and explore the deeps and shallows of the sea. Each animal form comes with its own abilities and is optimized for different biomes, giving players a lot of variety as they slink around, hunt other deep sea beasts, and explore what the oceans have to offer. You can play Deeeep.io aggressively like in other PVP style .io games, or you can evade conflict and just explore and try out the capabilities of each of the forms, giving you a fair amount of stuff to play with. 11. 2048.io(Image credit: Gabriele Cirulli)2048.io (opens in new tab) is a puzzle game, in the same vein as 1024, which itself is more like Threes. You move squares around a board, trying to combine like numbers to make larger ones (2 to 2, 4 to 4, and so on). It's very simple game, but difficult to master.Eventually, your board will be so full that you can't make any moves. At this point, you'll need to start over and be more strategic the next time you play. It's an addicting game and perfect for killing time.Best gaming mouse (opens in new tab) iOS 14.5 is about to drop and WWDC 2021 is only weeks away, so it seems this is a good moment to consider what's next for Apple's mobile systems.iPad widgets and Home screenAs recently noted here, Apple is expected to make a few changes to widgets and Home screen layouts on iPads. Principally, users will be able to place widgets anywhere on the iPad Home screen, rather than only in the Today View column. You'll also be able to replace all the apps on your Home page with widgets. And expect some changes to the lock screen also.New icon designsApple has altered the icon designs for three of its less widely used apps: Apple Music for Artists; App Store Connect; and the Apple Developers apps. All three now look more 3D, embossed, with icons surrounded by a thin lozenge-shaped border. These revamped icons may suggest a new design language for iOS, particularly as the same design lexicography is visible in macOS Big Sur.The last major iOS UI design took place in 2009.Notifications changesEnterprise users may like the improved notification controls, which become more responsive to status. Bloomberg recently claimed the OS will introduce more granular notification controls. These may include a little intelligence, so your device may not issue an incoming notification chime in the event you have set your status to driving, working, sleeping, or other custom categories.Automated message responsesThese changes to notifications could extend to message response. This means you'll be able to create automatic message responses that will be sent to others if you are contacted while working, sleeping, or involved in other activities defined by the user. At present, iOS will only share an automated response when the user is driving. Automatic message responses and notification changes should be of use to anyone trying to focus on getting work done.Control Center gets a little like Big SurThe Control Center is expected to see a redesign that makes it more consistent with Control Center on Big Sur. Apple vs. FacebookAs Facebook continues to dilute privacy in WhatsApp, Apple may move to make iMessage a more effective competitor to the service. This would extend to conversation flows that act more like social network chats rather than messages.Much more information on app privacyApple's improved privacy menu will show users which apps are collecting data about them, a move that should make it much easier to identify apps that attempt to undermine Apple's App Tracking Transparency rules.This should be a welcome step, as it will make it much easier to identify developers prepared to disrespect customers by failing to disclose their privacy practices in transparent fashion. It will also be of value to enterprises putting together approved-app policies.Dual biometrics?A somewhat dubious claim suggests iOS 15 will support dual biometric authentication for future devices, offering both Touch and Face ID. Conceivably this would allow users to demand both authentication methods are in place concurrently, and might also allow them to favor one above the other, such as when using Apple Pay while wearing a mask. What devices will it support?iOS 15 is currently expected to abandon support for iPhone 6S, 6S Plus and the last generation iPhone SE. The software may no longer support iPad Air 2 and the 5th-generation iPad and iPad mini. Once the OS is announced, you'll be able to check their status here.Pro apps for pro iPads?iPad critics have always been able to use the argument that Apple doesn't offer its pro apps — Final Cut Pro X, Logic Pro, and Xcode — to iPad users, not even on the latest M1-powered iPad Pro. All three apps have already been made native to run on M1-powered Macs, and while the architecture of both platforms is slightly different and memory requirements may limit what you can do with the apps when run on an iPad, the fact both machines run the same processor surely makes this more likely. Adobe, meanwhile, says it is working to ensure its apps run natively on Apple's M1 computers — and its experience developing Photoshop for M1 Macs surely shows what's possible using Apple Silicon.My take? One thing you need for a pro device is pro apps, and the opportunity to build those apps for iPad Pro has never seemed greater.What Apple is sayingApple isn't discussing the future of its operating systems yet and won't do so until WWDC starts on June 7. The company, however, is foreshadowing a little of its strategy. Marketing Vice President Greg Joswiak points out that as Apple makes its devices more powerful it creates opportunities for developers."When we created the very first iPad Pro, there was no Photoshop. There were no creative apps that could immediately use it. But now there's so many you can't count. Because we created that capability, we created that performance — and, by the way, sold a fairly massive number of them — which is a pretty good combination for developers to then come in and say, 'I can take advantage of that.' There's enough customers here, and there's enough performance. I know how to use that. And that's the same thing we do with each generation. We create more headroom to performance that developers will figure out how to use."We'll find out much more about this — and the APIs Apple intends to empower its developers to innovate with — at WWDC.Please follow me on Twitter, or join me in the AppleHolic's bar & grill and Apple Discussions groups on MeWe.
